

# Welcome to Champion Water Treatment

We would like to introduce the family of QUICKSILVER WATER TREATMENT SYSTEMS. QUICKSILVER is a trademark of Champion Water Treatment, a division of Cribley Drilling Company, Inc.

In 1979 Champion Water Treatment was started out of the need to better service our water well customers. Many customers expressed the desire to purchase water conditioning equipment from the company that constructed their well. Our customers like the fact that their water well and conditioning equipment is taken care of by one company which has dealt with water since 1946.

When selecting a water conditioning system for your family, you want to be sure you're getting the best. The QUICKSILVER line delivers the performance you expect at a great price. If it's pure water you're looking for, you've come to the right place. QUICKSILVER offers components of the highest quality, made in the U.S.A. by manufacturers with over 50 years experience.

QUICKSILVER water conditioners come standard with:

- Metered "on demand" regeneration for saving salt
- Turbulator for superior iron removal
- Attractive chrome-mylar insulated tank jacket (optional on Challenger models)
- Timed refill for consistent brine dosage, regardless of salt levels
- Fiberglass mineral tank
- High capacity resin
- Safety brine float installed in brine tank
- Potassium chloride "no salt" can be used
- Top quality control valves and components used in the industry for over 50 years
- 10 year limited manufacturer's warranty
- One year full service warranty if installed by Champion Water Treatment
- Made in the U.S.A.
- Call and ask about our many financing options

## **Champion Water Treatment**

**Water Softeners (meter/demand)**

**Twin Tank or Single Tank**

**Iron Removers (Chemical Free)**

**Reverse Osmosis  
(Drinking Water Systems)**

**Arsenic Removal Systems**

**Water Cooler Rental / Sales**

**Odor / Bad Taste Removers**

**Dura-Cube Salt Pickup or Delivery**

**Bottled Water Pickup or Delivery**

**QuickSilver**  
WATER TREATMENT SYSTEMS

## **Cribley Drilling Company**

**Wells 4" to 20"**

**24 Hour Pump and Well Service**

**Pressure Tanks**

**Test Wells**

**Irrigation & Pond Wells**

**Geothermal & Closed Loop**

**Monitoring Wells**

**Test Borings**

**Well Abandonment**

## The CHALLENGER

The CHALLENGER is a good way to get a quality water conditioner at a great value. The CHALLENGER comes standard with a demand regeneration meter and can handle many of the same conditions that the CHAMP or TWIN can. With a simpler design, it has been the choice many have selected to solve their family's water problems.

The CHAMP water conditioner is a single tank design which can handle almost any situation. It has a five cycle heavy duty control valve which comes standard with a "demand regeneration" meter.

The ingenious CHAMP meter is engineered to save you money on salt\* and water. This system will regenerate with water and salt only when the meter initiates the procedure. If your family has not used the capacity of the water

conditioner, it will not cycle like a standard non-metered\*\* system.

The program is also set for a one day water reserve to provide soft water throughout the day until the softener can regenerate during the night. For the homeowner that is looking for the ultimate in quality and value from a water conditioner, the CHAMP is the natural choice.

\* Potassium chloride no salt" can also be used.

\*\* Non-metered units available upon request.

## The TWIN

The QUICKSILVER TWIN is recommended for heavy residential use. It always delivers a continuous supply of conditioned water through the meter controlled duplex control valve. There is never any hard water by-passed, just uninterrupted clean pure water.

Another advantage of the TWIN is that when it regenerates it uses pure softened water for a more thorough regeneration. The TWIN regenerates as soon as the control valve determines the tank capacity is exhausted. Since the system does not need to wait until the middle of the night to regenerate, it needs no clock; therefore power outages cannot throw off the cycle time.

Metered water conditioners that have a single resin tank must have a one day reserve of soft water built into the program. This means that the water conditioner may need to regenerate before the tank is exhausted to be sure there is enough conditioned water to make it through the next day. The TWIN can wait until the very last gallon of conditioned water is used because of the second resin tank.

## The CHAMP

## The RUST BUSTER

The QUICKSILVER RUST BUSTER IRON REMOVAL SYSTEM is the key ingredient to any water system that has extremely high iron or sulfur (rotten egg) odor. The system is installed in front of the water conditioner to catch all of the iron before it can do any irreparable harm to your plumbing system. There is no need for harmful chemical additives to backwash this filter. When it is time to regenerate, this system will automatically begin backwashing using only water. There is no need for salt or regenerates.

The difference between the QUICKSILVER and most other systems is the ingenious air injector. When the air is injected, the iron in the water is oxidized to create particles that can be trapped in the filter. By removing the iron, the iron filter protects the water softener from solid iron build-up and eliminates the taste and odor associated with iron and sulfur. It also extends the life of the softener.

The QUICKSILVER RUST BUSTER IRON REMOVAL SYSTEM is capable of removing up to 25 ppm of iron, up to 2-3 ppm sulfur and needs no periodic maintenance. There are no filters to change and no salt to add, just relax and let it take care of your iron worries.

## REVERSE OSMOSIS DRINKING WATER SYSTEM

The QUICKSILVER DRINKING WATER SYSTEM is designed to use the reverse osmosis method. This system provides purified water right in your home. It will improve the taste of your water by removing up to 95% of minerals and most hazardous contaminants that make water taste and smell bad. One of the biggest advantages this drinking water system offers is the removal of sodium the water conditioner leaves behind.

The QUICKSILVER system will save you money by replacing the need for expensive bottled water. There will be no need for weekly water deliveries or trips to the supermarket to pick up heavy jugs of water. The purified water is at your finger tips. Just open the separate faucet installed at your kitchen sink. It can also be connected to your refrigerator if equipped with an ice and /or water dispenser.

Other water purification equipment including distillation and filtration units are available.

CHAMPION WATER TREATMENT offers salt and bottled water delivery. We service most water conditioner brands for customers in our service area.
